## **Establishment of the Maximum Residue Limits for Agricultural and Veterinary Chemicals in Foods**

The Food Sanitation Act authorizes the Ministry of Health, Labour and Welfare (MHLW) to establish residue standards (maximum residue limits, “MRLs”) for pesticides, feed additives, and veterinary drugs (hereafter referred to as “agricultural and veterinary chemicals”) that may remain in foods. Any food for which standards are established pursuant to the provisions in Article 13, Paragraph 1 of the act is not permitted to be marketed in Japan unless it complies with the established standards

On May 29, 2006, Japan introduced the Positive List System<sup>1</sup> for agricultural and veterinary chemicals in food. All foods distributed in the Japanese marketplace are subject to regulation of the system.

The MHLW is going to modify or newly set MRLs in some commodities for the following substances, including modification of MRLs on several Veterinary drugs in some commodities that were provisionally set at the introduction of the Positive List System:

Pesticides : **Tolfenpyrad, Fenquinotrione, Flazasulfuron ,**  
Pesticides and Veterinary drugs : **Cypermethrin**  
Veterinary drugs : **Isometamidium, Eugenol, Chlorhexidine,**  
**Decoquinatate, Nafcillin, Nitroxinil, Virginiamycin, Mecillinam,**  
**Menbutone**

<The manner of submitting comments>

The Ministry of Health, Labour and Welfare (MHLW) will amend the existing standards and specifications for food as shown in this document. Please provide comments in writing by Tuesday April 13, 2021. After the given date, comments should be directed to the enquiry point in accordance with the WTO/SPS Agreement.

If you wish to request Japan to adopt the same limits as your country’s MRLs, you are requested to submit data supporting your country’s MRLs, such as risk assessment and residue data.

<sup>1</sup> The aim of the positive list system is to prohibit the distribution of any foods which contain agricultural chemicals at amounts exceeding a certain level (0.01 ppm) in the Japanese marketplace unless specific maximum residue limits (MRLs) have been set.

## Summary

### Establishment of Maximum Residue Limits for Agricultural Chemicals in Food

**Tolfenpyrad** (Pesticides: Insecticides, Acaricides): Permitted for use in Japan. The MHLW is going to establish MRLs on several commodities in response to requests for setting MRLs by the Ministry of Agriculture, Forestry and Fisheries (MAFF) with the intention to expand its use patterns.

**Fenquinotrione** (Pesticides: Herbicide): Permitted for use in Japan. The MHLW is going to establish MRLs on some commodities in response to requests for setting MRLs by the MAFF with the intention to expand its use patterns. These actions will not strengthen the current regulation for any commodities.

**Flazasulfuron** (Pesticides: Herbicide): Permitted for use in Japan. The MHLW is going to modify MRLs in some commodities that were provisionally set at the introduction of the Positive List System.

**Cypermethrin** (Pesticides • Veterinary drugs: Insecticide): Permitted for use in Japan. The MHLW is going to establish MRLs on several commodities in response to requests for setting MRLs by the MAFF with the intention to expand its use patterns and also going to modify MRLs in some commodities that were provisionally set at the introduction of the Positive List System.

### Modification of MRLs for veterinary drugs that were provisionally set at the introduction of the Positive List System

All current MRLs and residue definitions on the following veterinary drugs would be retained after reconsideration in consideration of risk assessment.

**Isometamidium** (Parasiticides)\*, **Eugenol** (Anesthetics),  
**Chlorhexidine** (Disinfectants), **Decoquinat** (Parasiticides)\*,  
**Nafcillin** (Antibiotics)\*, **Nitroxinil** (Parasiticides)\*, **Virginiamycin** (Antibiotics)\*,  
**Mecillinam** (Antibiotics)\*, **Menbutone** (Antidiarrheals)

\*: Not permitted for use in Japan
